

AUTO RECOVERY RAPID DOOR

Zippered Quick door Features:

Open: 1.2-2.0 m / sec.

High airtight energy efficient: zipper patented technology and curtain rail technology combines high sealability for maximum energy efficiency

Self-healing maintenance cost savings: When the door by the impact and dislocation occurs, repeat mosaic patented technology that is derailing repair system starts automatically, without any manual and automatic reset to its original state force to effectively reduce maintenance time saving cost.

High security: curtain soft and elastic, without any load at the bottom of the door to change, to ensure that the operator in an emergency state in the collision to the door when the operation will not cause harm

PUSH PULL Dual Hinge system: unmatched safety record and absolute tightness in PUSH PULL twin shaft system. Loading close dependence and the curtain at the bottom of the traditional fast door to achieve, you can drive dual axis system so that the upper curtain sprocket perfect bite does not depend on the door of its own weight can be achieved fast closing, this patented technology to avoid the hard parts usage of.

More than one million times the durability performance: speed doors reduce the use of materials, easy to wear, strong and flexible curtain is very durable, can withstand millions of opening and closing operation, in the use of some products has reached 500 million times for opening and closing.
